

## Abstract

A sheet-form adhesive preparation which gives a comfortable refreshing feeling in use, gives a wet feeling to the skin, and is usable as a cosmetic, medicinal, or quasi-drug preparation for the sake of skin adjustment and beauty. The preparation preferably has a quantity of heat required for water evaporation of 0.6 to 13 (cal) per unit area ( $\text{cm}^2$ ) when exposed for 30 minutes to an atmosphere of  $25^\circ\text{C}$  and 60% Rh.
